# Euromobil Levitas Glass

By **Melanie Gardener** - June 20, 2024

Showcased during the recent Milan Design Week at the company's flagship store, this is the stunning Euromobil Levitas Glass kitchen, designed by architect Roberto Gobbo along with the Euromobil R&D team.

Levitas Glass is part of a collection that reflects the company's commitment to responsible and avant-garde design, representing not only functionality and contemporary design but also a deep connection with ancient cultural heritage.

The term *levitas* evokes the idea of lightness and movement, inspired by the fluidity of air: the Levitas kitchen embodies this concept through an airy and elegant design characterised by clean lines and transparent materials that impart a sense of spaciousness to the environment.

Levitas Glass prominently features transparent extra-clear glass in the doors of wall units, bases, and tall units, both at the front and sides. The structure is composed of an aluminium frame lacquered in aged brass. The door opening systems are threefold, varying according to use. The backs of bases and wall units are in Naturale sanded-effect oak while the tall units have glass backs.

The paneling that surrounds the entire kitchen structure is in Wood caneté plus Natural. The central island's worktop and corresponding sides are in Taj Mahal quartzite natural stone, a natural material highlighted by the light colour that shifts from cream to grey, known for its resistance and durability. The Fast sliding snack top, 6 cm thick, is in natural sanded-effect oak.

Glass and aluminum, with their transparency and lightness, also highlight the area of sustainability which is so important in Europe. These are fully recyclable materials that never lose their original qualities. Their processing ensures that the glass is not glued to the aluminium, so the pane can easily be removed to separate the pieces for recycling at the end of their life. In making this choice, Euromobil showcases its commitment to environmental sustainability, presenting eco-friendly and responsible solutions.
